Introduction

Here is an introduction to my amazing capstone project. You will be impressed.

Really important stuff

In the second chapter, I'll tell you some very important things. Indeed, my work is based on Tukey (1972).

The important idea is the measure of a robust correlation (Tukey 1972).

Less important stuff

Although I read all about Halmos, I never ended up citing the work, so there is no in-text citation. Which means, you'll notice, that the Halmos citation does not show up in my references section even though Halmos is in the .bib file.

To remember

If you use a reference, you should cite that work. In Quarto, the citation is done with the @... or [@...] format. If you do not cite a particular work, the reference will not show up in your references section, even if the entry is in your .bib file.
